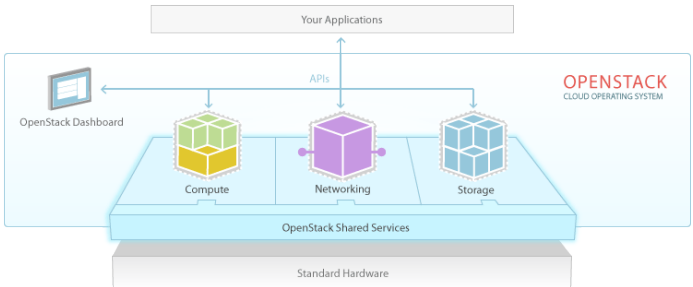
What is “the OpenStack”?

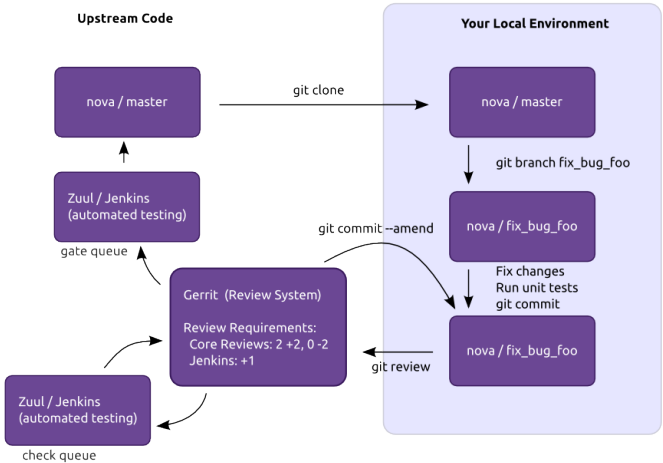
- Open Source Cloud Software: Apache License Version 2.0
- consists of a lot of projects: 57 projects
- released every 6 month: Latest version is called ‘Mitaka’



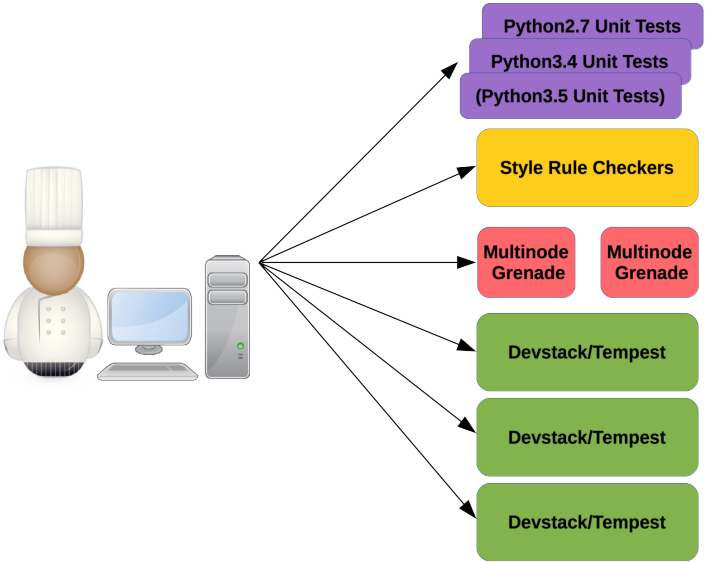
What is "the OpenStack QA"

- An official OpenStack project team
- Develop, maintain, and initiate tools and plans to ensure the upstream stability and quality of OpenStack, and its release readiness at any point during the release cycle.
- 17 repositories (2016/7/8)
  - Tempest, DevStack, os-testr, openstack-health, stackviz, Grenade, Hacking, Bashate, etc..

What is “the OpenStack Gate”?



What Happens when you push a change?



check (268)

Newly uploaded patchsets enter this pipeline to receive an initial +/-1 Verified vote from Jenkins.

The Size of the Gate

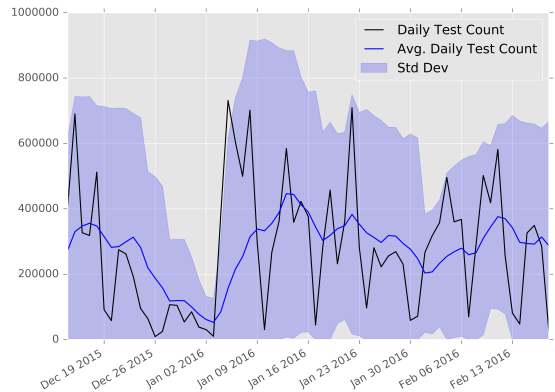
One Proposed Change Generates:

- 5–25 Devstacks
- ~10,000 integration tests (roughly 1.5k per devstack)
- ~151 2nd level guests created in each devstack cloud
- ~1 GB of logs uncompressed for each run

In aggregate:

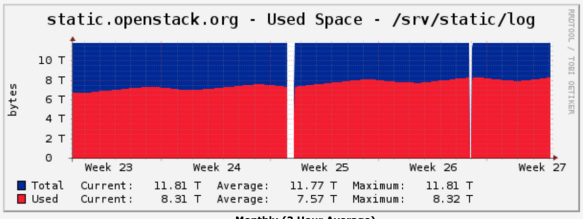
- ~12,500 jobs run in check and gate daily
- ~0.01% individual tempest test failure rate
- ~.77% tempest run failure rate

Number of Tempest Tests per Day in the Gate Queue:



Log Server

- Log Server: http://logs.openstack.org/
- Archive of all artifacts from all jobs for ~4 months
- ~8 TB of data compressed

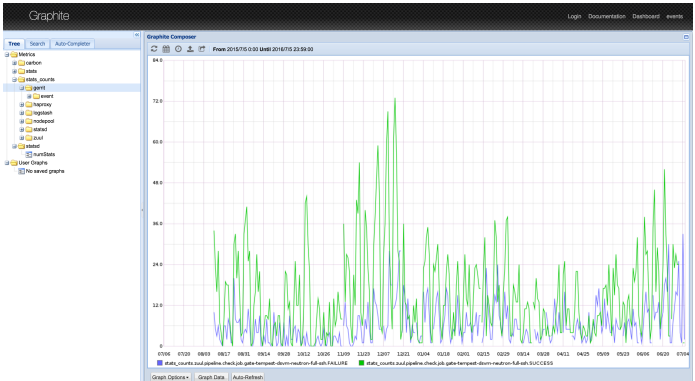


Problem/Issue

- It's difficult to find a problem from the large amount of log
- It's difficult to find performance regression/improvement
-

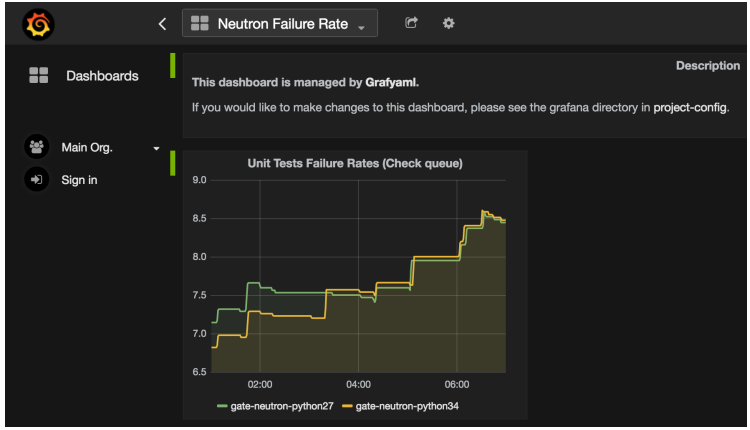
Graphite

- http://graphite.openstack.org/
- Infra services report to graphite
- Include job results
- Limited to job level data
- Time based, can't be linked to an individual job
-



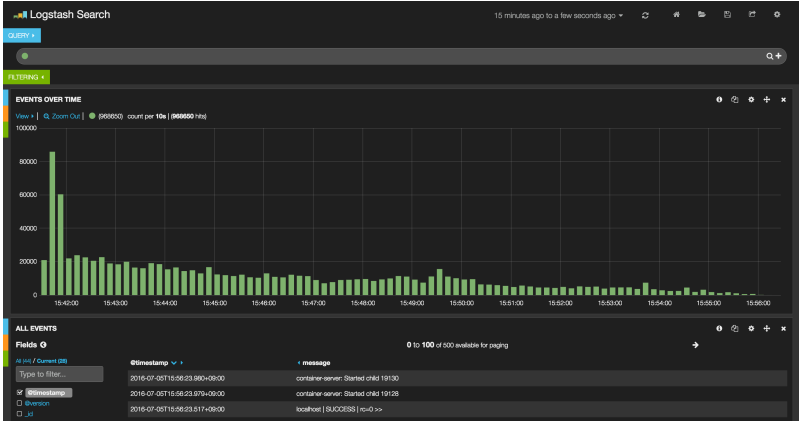
Grafana

- http://grafana.openstack.org/
- Provides a layer on top of graphite to easily make useful visualizations
- Adds a number of dashboards
- Some projects using this to track job failure rates



ELK

- Elasticsearch, Logstash, Kibana
- http://logstash.openstack.org
- Provides a search engine on top of are job artifacts
- Limited to 10 days of results

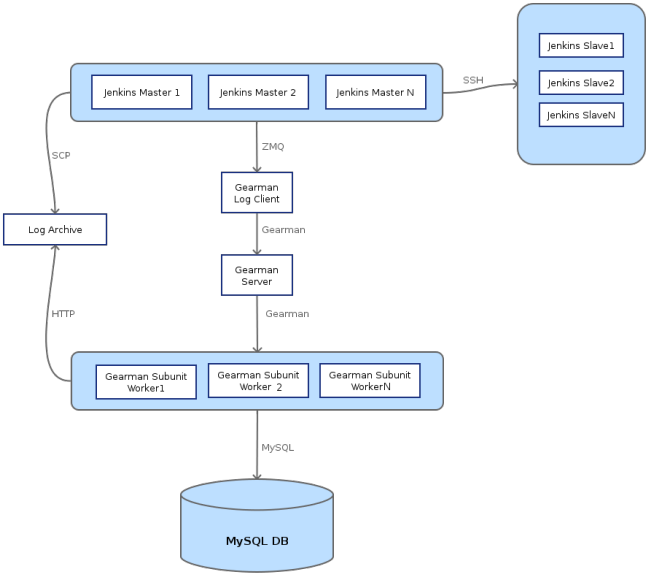


Elastic Recheck

- Designed to answer the question "Have you seen this recently?"
- http://status.openstack.org/elastic-recheck/
- 
subunit2sql

- Designed to store test results data in a sql database
- Provides a DB schema and a python API for interacting with the database
- Used to the results from test runs for 6 months
-

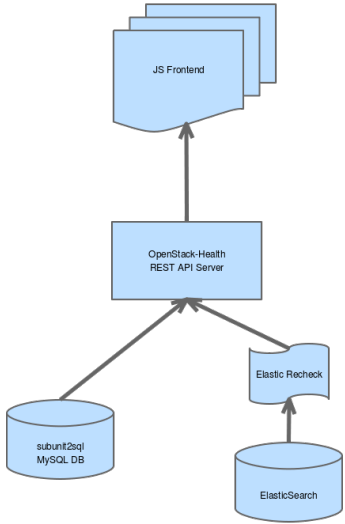
subunit2sql in OpenStack Infrastructure



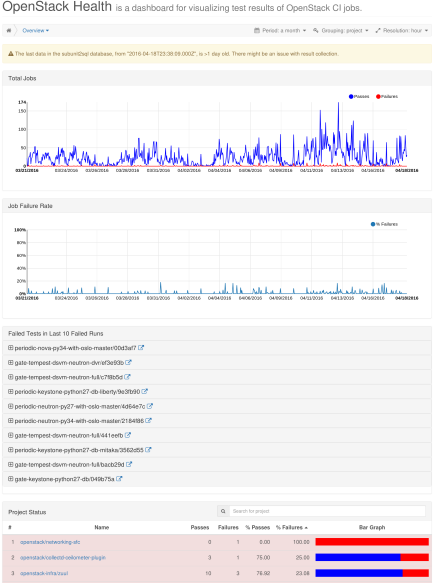
openstack-health

- http://status.openstack.org/openstack-health/#/
- Designed to be a single point of access for all the data about the gate
- Currently can leverage subunit2sql and elastic-recheck

OpenStack-Health Architecture



Using OpenStack Health



Data Driven Decision Making

- Determine when it's time to skip a test
- Identify tests that are actually catching bugs
- Determine if failures are isolated to region, config, etc.
-

Finding trends amongst the noise

- Catch performance regressions
-

Issues

- Too many varied data sources each with unique limitations
-

Future work

- Integrate all the things in openstack-health
- Use the data to optimize our test runner scheduler
-

Where to get more information

- openstack-dev ML openstack-dev@lists.openstack.org
